

Dataset

question: "Aida has twice as many dolls as Sophie, ... How many dolls do they totally have?",

answer: "If Sophie has twice as many dolls as Vera,...they have 80 dolls+...140 dolls\n#### 140"

High level model checker

...Step 2 - To
compute total:
We consider
the ratio Aida :
Sophie : Vera
= 4 : 2 : 1

Unjustified
abstraction
shift

...Step 2 - To
compute total:
Add the dolls of
Aida, Sophie, Ver
a together

Final draft dataset

summary: "Total 3 steps: Step 1 - Calculate ...; Step 2 - ...dolls.",
steps: ["Step 1 - Calculate Sophie's dolls;", "Step 2 - ...total dolls."],
answer_text: "140",

detailed_process: "Step 1 - Calculate Sophie's dolls: Sophie's number of dolls is twice ... = 40 dolls. Step 2 - ...total dolls: To find the total number of dolls, add ...80 + 40 + 20 = 140 dolls.#### 140"}
}
